READING
PHOTOGRAPHS

✱ *Looking at the photograph at the end of this guide (or the photograph you have pasted):*
- describe the image,
- identify each of the elements below.

DIFFERENT ELEMENTS OF A PHOTOGRAPH

• **Informational content**
What does the image tell you?
(who? context, details, angle, point of view? background and foreground?)

• **Aesthetic elements**
How does the image make you feel?
(emotions are associated with certain techniques, such as dramatization by light)

• **Iconic or symbolic components**
(cultural references and tone that allow the interpretation of an image)

• **"Source" data**
credit, copyright, distribution channel

• **Caption**
date, place, identification of the people represented, and a brief context.

IMAGES CAN MANIPULATE

① The scene can be **manipulated at the time of the shoot** without the reader's knowledge. Is the scene or portrait staged? Does this matter? What is not in the frame? What is the photograph's point of view? What might that perspective have hidden from view?

② Content can be **changed after shooting** (retouching, cropping)

③ Context can be **falsified** (date, circumstances)

④ Video can be edited to distort its content (an excerpt can be misleading)

📑 **RESOURCE #** ⑪

⑤ **Deep fakes** are very realistic fusions of two videos through the use of artificial intelligence

⑥ **A photograph is a moment in time.** Why was this image the one published? Think about what may have happened before and after the photograph was taken. Why was that moment/image used to tell the story?

HOW DO YOU KNOW IF AN IMAGE IS AUTHENTIC?

① **Slow Down**
• We see hundreds of images on a daily basis--take a moment to carefully look at the photograph. What do you notice that you might not at first glance?

② **As with any news, use lateral reading**
• Who is the author? What media published it?
• Check the context, the caption and the original publication
• Has it been altered (cut, cropped)?
• Does it appear on several sites, including reliable or legitimate sites? (Often a hoax is referenced, or flagged by social media networks such as Facebook and Instagram.)

③ **Use Reverse Image Search on Google**
See how to use it at the link below

📑 **RESOURCE #** ⑫

④ **Deep fakes appear so real it is often difficult to tell if they are fake.**
Yet, subtle movements and some details are hard to reproduce or merge, so check the hair of the person depicted, the movement of their eyes, the direction of the light, and the point between the bodies/faces and the background.

📑 **RESOURCE #** ⑬

✱ *Exercise:*
Have a photograph circulate among a group of persons and have them note on it what they notice.

📑 **RESOURCE #** ⑭

CORCORAN, CALIFORNIA
MARCH 14, 2014

Fallowed tomato field outside the town
of Corcoran. 2014 was the driest year ni
California's recorded history.
The State's vast central valley is one of
the richest farming regions in the world
and grows about half of all US produce,
but the record drought has caused billions
of dollars in lost farm revenue and
pushed agricultural communities into an
economic and environmental crisis.
